

# Server Side Delegate Authorization Guide

Following the steps to do server side delegate authorization.

## 1. Install Sentinel Runtime Environment

To remote authorize HiAPI, **Sentinel Admin Control Center**(ACC) is required on the local computer. Install Sentinel Runtime Environment to have the ACC on the local computer.

- On **Windows**, run *windows/win\_install.bat*. It needs administrator privilege.
- On **Linux**, install the proper package in *linux* folder. It needs administrator privilege.

## 2. Configure Sentinel Admin Control Center

Open 127.0.0.1:1947 by browser. Execute the following:

- Go to **Configuration/Access from Remote Clients**.
  - Set **Allow Access from Remote Clients** to **Anyone**, and cloud licenses can be consumed without identity.

- Set **Access Restrictions**:

```
allow={IP Domain}
deny=all
```

For example:

```
allow=140.116.*.*
deny=all
```

- Press **submit**.
